### DETAILED ACTION

Claims 1-10 are pending.

#### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7 drawn to a compound of formula I, namely trisubstituted triazine compound bearing a bicycloaryl ring, process of making, composition and method of use as herbicides classified in class 544, subclass 206, 207, class 504, subclasses 230, 232
- II. Claims 8-10 drawn to an intermediate compound of formula V and formula III, classified in class 546, subclasses 159 etc., class 548, subclass 398, class 564, subclasses 237, 428 etc.,

If Group II is elected applicant should elect a specific A choice for examination.

The inventions are distinct, each from the other because of the following reasons:

As per MPEP § 803, there are two criteria for a proper requirement for restriction between patentably distinct inventions:

- (A) The inventions must be independent or distinct as claimed and
- (B) There must be a serious burden on the examiner if restriction is required.

Invention I and II are independent and distinct from each other because they are directed to structurally dissimilar compounds that lack common core, namely, 1,3,5-triazine versus benzopyran versus tetrahydroquinoline versus tetrahydronaphthalene. Consequently, the groups have different classifications and require separate prior art searches. They can be made and used independently. Art which may render obvious or

Art Unit: 1624

anticipate one of the groups would not necessarily do the same for the other group. For example prior art cited in the International Search Report may not be applicable to all the above groups. Each can support a patent as the compounds of each group are capable of being utilized alone not in combination with other members listed in the Markush group.

In addition, it is necessary to classify and search all the controlling cores generically embraced in Group I and II such a search of all controlling cores would be a serious search burden.

Inventions I and II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as pharmaceutical agents as well as making compounds with different scope as evident from scope of A of instant claim and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

In view of distinct nature of each of the invention, the restriction is set forth in writing.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
